WEEK SIX

Week Six: Course Project Coding Update

Code Completed

I reworked the State and StateMachine class to be able to handle MessageDispatcher and Telegram classes. I also completed work on my Robber and RobberOwnedStates class.

Challenges/Hardships

One of my main challenges/hardships is finding time to actually sit down and write code. I have been extremely busy at work and have not been able to code as much as I usually do. I am also behind which does not help. I had to go back and complete assignment three to create UML.

Overcame

After creating the UML, which was really time consuming, it has made coding the required classes easier. Now I should be able to finish each class quickly and move on to testing to see what needs to be tweaked.
